JOANNA ROSS

TECHNICAL OPERATIONS SPECIALIST

Mount Forest, ON | 416-876-1490 | abacus36@outlook.com
Portfolio: phyliaconsulting.ca

Professional Summary

Technical operations and support professional with 10+ years of experience in telecommunications, network troubleshooting, service delivery, and technical training. Experienced in resolving complex escalations, documenting repeatable support processes, and explaining technical findings. Extends this background through independent projects in business applications, workflow automation, AI-assisted implementation, and self-hosted infrastructure. Seeking technical operations work that combines incident resolution, application support, and practical process improvement.

Technical Skills

- Incident Management: Technical escalations, service diagnostics, network troubleshooting, and collaboration with engineering teams.
- Solutions Implementation: Requirements clarification, predictive Wi-Fi design, equipment configuration, installation coordination, and technical handover.
- Automation and Scripting: n8n workflows, basic Python scripting through AI-assisted projects, REST/JSON integrations, and structured AI outputs.
- Process Documentation and Training: Troubleshooting playbooks, knowledge-base content, customer reports, technician mentoring, and workshops.

Work Experience

Advanced Support Specialist | Cogeco Connexion

Feb 2018 - Nov 2026

- Resolved third-level escalations for business and residential customers across Wi-Fi, networking, cable modems, EPON ONUs, and static IP services.
- Investigated connectivity and service issues using packet analysis, performance dashboards, and vendor diagnostics to isolate faults and guide resolution.
- Created predictive Wi-Fi designs in Ekahau and Hamina, translating coverage requirements and technical findings into deployment recommendations.
- Standardized troubleshooting steps in playbooks and knowledge-base articles, giving technicians repeatable procedures for diagnosing recurring issues.
- Produced customer performance reports and worked with engineering teams on complex incidents; shared practical support methods through training and mentoring.

Wi-Fi Delivery Specialist | Cogeco Connexion

May 2016 - Feb 2018

- Coordinated installation and provisioning of managed business Wi-Fi services and supported static IP installations.
- Worked with sales and engineering to develop business cases and custom technical solutions for business customers.
- Configured and upgraded multi-vendor network equipment and resolved second-level installation and provisioning issues during service delivery.

Projects

Phylia Consulting | Business Systems and AI Workflows

2026 | Independent development using AI-assisted tools

- Built a website and CRM workflow that carries customer inquiries through review, proposals, customer responses, invoicing, and bookkeeping.
- Connected a Cloudflare Worker intake endpoint to a Flask API and PostgreSQL database, with input validation, origin restrictions, and server-side authentication.
- Integrated AI-assisted proposal drafting with validated JSON outputs and editable fallback templates so proposal preparation can continue when AI is unavailable.
- Implemented human approval before outbound customer actions, keeping generated drafts separate from approved execution.
- Connected inbound email review, recurring-service reminders, and scheduled tasks; suppressed duplicate failure alerts to keep notifications actionable.
- Developed audit logging, private receipt storage, database migrations, and focused workflow checks; documented system components and deployment procedures.

Home Lab | Self-Hosted Applications and Monitoring

2026 | Personal technical environment

- Configured a Proxmox-based lab with virtualized workloads and Docker services for automation, databases, local AI, and monitoring.
- Built a personal capture and list-management system using PostgreSQL, FastAPI, n8n, and Ollama, with queued processing states.
- Used Prometheus, Grafana, node-exporter, and cAdvisor for host and container metrics; configured Cloudflare Tunnel access for n8n.
- Troubleshot service reachability, network addressing, and application connectivity across a multi-host environment.

Tools and Technologies

- Enterprise support: Windows, Linux, ServiceNow, Jira, Confluence, Salesforce, Wireshark, Grafana, Cisco, Juniper, Aruba, Plume, Ekahau, and Hamina.
- Independent projects: n8n, PostgreSQL, Python/Flask/FastAPI, REST/JSON, HTML/CSS/JavaScript, Git, VS Code, Docker, Proxmox, Cloudflare, Ollama, and Prometheus.

Education and Certifications

JNCIA | Earned May 2024

CCNA | Previously held, 2016 - 2019

Wireless Networking Certificate | George Brown College, 2016

Computer Programmer/Analyst Diploma | George Brown College, 2000

Earlier Experience

Computer Tutor and Assistant | Toronto Employment and Social Services | 2014 - 2015. Taught beginner Word and Excel and assisted with online applications and computer use.

Technical Support Agent, Sony Mobile | Teleperformance, Greece | 2012 - 2013. Resolved customer technical inquiries by phone and email and maintained support records.
